Indian Coco Peat.

Matched to Your Requirement.

Coco peat sourcing for importers, commercial growers and international buyers.

5 KG BLOCKS | GROW BAGS | BRIQUETTES | HUSK CHIPS

BUYER-DEFINED SPECIFICATIONS | LOT-SPECIFIC OFFERS | EXPORT PACKING

OVERVIEW

A focused sourcing partner for Indian coco peat

NAHFAM Global Enterprises is a Bengaluru-based merchant exporter focused on Indian coco peat and coir substrates. We work from the buyer's requirement - product form, treatment, EC level, expansion, quality, quantity, packing and destination - and match it with suitable South Indian processing and supply sources.

OUR PURPOSE

To connect genuine Indian coir sources with international buyers through clear specifications, responsive communication and order-specific supply.

HOW WE WORK

Simple, buyer-led and lot-specific

01 Requirement Product form, treatment, target EC/pH, expansion, packing and destination.	02 Source Matching Identify suitable coir processing units and experienced supply partners.
03 Lot Confirmation Confirm available specifications, test values and samples where applicable.	04 Commercial Offer Finalize price, packing, documentation and shipment plan.

Primary sourcing focus: established Tamil Nadu coir-processing clusters; final source is selected lot-by-lot.

PORTFOLIO

INDIAN COCO PEAT RANGE

Core coir substrate categories for commercial horticulture, growing media and distribution

COCO PEAT PRODUCT / TYPE	TYPICAL BUYER-RELEVANT SPECIFICATIONS
5 kg Block - Washed Low EC	Typical target EC <= 0.5 mS/cm (test method to be agreed), pH 5.5-6.8, expansion about 70-75 L/block, moisture <= 20%, 5:1 compression.
5 kg Block - Unwashed / High EC	EC typically > 1.0 mS/cm, pH about 5.5-6.8, expansion about 65-75 L/block, moisture <= 20%; used for general horticulture, soil blending and landscaping.
Coco Grow Bags (Hydroponic Slabs)	Washed / buffered substrate; buyer-defined slab dimensions and pith-chip blends; UV-stabilized sleeves with plant and drain holes as required.
650 g Coco Briquettes	Washed low-EC grades available; compact retail / nursery format, with shrink-wrap, labels and master cartons as required; expansion confirmed lot-wise.

SELECTED COCO SPECIALTIES

Distinctive substrate formats subject to buyer specifications and lot availability

Coco Husk Chips	Graded coir chips in buyer-defined cut sizes for aeration and drainage in orchid, potting and substrate blends.
Custom Blended Slabs	Customized ratios of coco pith and chips, with agreed dimensions, density and pre-cut plant / drain holes for commercial greenhouses.
Buffered Coir Slabs	Calcium-based buffering can be specified to reduce exchangeable sodium / potassium and support more controlled nutrient management.

All values above are typical sourcing targets, not standing guarantees. Final specifications are confirmed for the offered lot and agreed test method.

LOT VERIFICATION

SPECIFICATION & PACKING

The commercial and quality details confirmed for the actual offered lot

PARAMETER	LOT-SPECIFIC CONFIRMATION
Product / form	5 kg compressed block, grow bag slab, 650 g briquette, husk chips or buyer-defined coir substrate.
Treatment	Washed low EC, unwashed / high EC, buffered, or custom treatment as required.
Origin / processing	Actual processing location / producing cluster in South India, confirmed with the offered lot.
EC / pH	Target EC and pH with the agreed test method (for example 1:1.5 extraction where applicable).
Expansion / moisture	Expanded volume per block or L/kg, plus shipment moisture target and tolerance.
Structure / impurities	Particle / chip size, fibre content, sand / foreign matter and any buyer-defined quality limits.
Packing	Floor loaded, palletized, shrink-wrapped, branded / labelled or buyer-agreed retail / bulk format.
Shipment	Quantity, Incoterm, loading port, destination port, sailing plan and container availability.
Documents / tests	Commercial and quality documents, lab report, certificate of origin, phytosanitary / fumigation certificates as required by destination and buyer.

PACKAGING & LOADABILITY

40 ft HC floor-loaded: up to about 26 MT is common for dense 5 kg block programs. **Palletized:** typically around 20 pallets and about 22-24 MT. **Custom:** grow-bag dimensions, pre-cut holes, labels, cartons and private branding can be aligned with the buyer.

Actual loadability depends on block dimensions, moisture, pallet configuration, container payload limits and destination requirements.

COMMERCIAL TERMS

EXPORT & COMMERCIAL

Clear commercial terms after the requirement is confirmed

EXPERIENCED SOURCING SUPPORT

NAHFAM Global Enterprises is a growing merchant-export venture supported by South Indian coir processing and supply partners whose teams bring more than 10 years of export and production experience. NAHFAM coordinates each offer around the actual buyer requirement and offered lot.

PLANNED EXPORT ROUTING

V.O. Chidambaranar Port (Tuticorin) and **Chennai Port** are our primary planned routes for Tamil Nadu-sourced coco peat. The final loading port is selected according to source location, destination, sailing schedule, freight and container availability.

PRICING APPROACH

We provide current price indications against a confirmed requirement. Product form, treatment, EC target / test method, expansion, quality, quantity, packing, Incoterm, destination and prevailing logistics determine the final quotation.

FOR AN ACCURATE OFFER

Please share the following with your enquiry:

- Product form / grade	- Required quantity / trial volume
- Treatment: Low EC / High EC / Buffered	- Target EC / pH and preferred test method
- Expansion / moisture / blend requirement	- Grow bag dimensions or chip size, if applicable
- Packing: palletized / floor / branded	- Destination port / country
- Incoterm: FOB / CFR / CIF	- Testing / documentation requirement
